§879.1 Adopting Order

(a) Pursuant to article 12 of the Public Health Law, the Water Resources Commission, after proper study and following a public hearing conducted by the former Water Pollution Control Board, held on due notice, hereby adopts and assigns the following classifications and standards of quality and purity to all surface waters within the Schoharie Creek drainage basin, as hereinafter defined. Said drainage basin includes all land and surface water areas of the Schoharie Creek drainage basin except the waters contained within boundaries of State-owned forest preserve lands.

(b) This adoption and assignment of standards of quality and purity to the above designated waters shall be effective February 1, 1963.

§879.2 Designated Waters

The designated waters are located in the Schoharie Creek drainage basin, a portion of the Mohawk River drainage basin, as outlined on map 1, section 879.7, *infra*, excluding the waters contained within boundaries of State-owned forest preserve lands, and as contained within the topographical limit line shown on the reproduced topographical reference maps in section 879.9, *infra*.

§879.3 Definitions

The several terms, words, or phrases hereinafter mentioned shall be construed as follows:

About DEC

(a) Item No. In table I an item number is assigned to each specifically designated waters or portions thereof.

(b) Waters index number as appearing in table I shall mean that number or abbreviation assigned to any designated waters or portions thereof for the purpose of identification.

(1) The numbering or index system used to identify specific waters of New York State was adapted from that used by the New York State Conservation Department in its biological survey series of reports on the watersheds of the State. The primary waters of a drainage basin, such as rivers or large lakes, are usually referred to by name or abbreviation. Tributaries of primary waters are consecutively numbered progressing upstream from the mouth. Ponds and lakes are numbered consecutively as they are encountered, such number being preceded by the letter P. Tributaries of such lakes or ponds are numbered consecutively as they enter, progressing clockwise around the lake or pond from its outlet or mouth. When isolated lakes and ponds are referenced by a waters index number, it is merely for convenience of their identification and location within a subdrainage basin, and it is not necessarily indicative of their being tributary to any waters to which no surface connection is shown on the reference maps.

(2) This system was applied to the basin under consideration by the Conservation Department in its biological survey of the Mohawk-Hudson watershed in 1934 and has been closely followed in connection with the identification of the waters with the following exceptions: some of the stream numbers do not run consecutively due to the omission of streams originally shown on older maps employed by the Conservation Department at the time of its 1934 survey, but not shown on newer maps reproduced herein. Conversely, a few streams not shown on the older maps but appearing on the newer maps are designated by the letters a, b, c, etc.

(3) The system as applied to the identification of waters in the Schoharie Creek drainage basin may be illustrated as follows:

Waters Index Number	Name of Waters	Explanation
H	Hudson River	Primary Waters.
H-240	Mohawk River	The 240th tributary of the Hudson River numbered consecutively upstream from the mouth.
H-240-82	Scholarie Creek	The 82nd tributary of the Mohawk River numbered consecutively upstream from the mouth.
H-240-82-63	Cobleskill Creek	The 63rd tributary of Schoharie Creek numbered consecutively upstream from the mouth.
H 240-82-63-9 -P 583	Cobleskill Reservoir	The 583rd pond, lake or reservoir encountered in the biological survey area of the Mohawk River-Upper Hudson River watershed.
H-240-82-63-9 -P 583-2	Unnamed stream	The 2nd tributary of Cobleskill Reservoir numbered in a clockwise direction from the mouth.

(c) The abbreviations trib., tribs., subtrib. and subtribs. indicating tributary, tributaries, subtributary and subtributaries shall mean any stream, lake, pond, or other body of surface water which flows into any other stream, lake, pond, or other body of surface

water. Where no tributary, tributaries, subtributary or subtributaries are mentioned, the specifically designated waters shall include only the stream, lake, pond, or other body of surface water referenced by such waters index number; where tributary, tributaries, subtributary or subtributaries are mentioned after the waters index number, the specifically designated waters shall include the stream, lake, pond, or body of surface water referenced by such waters index number and all tributaries and subtributaries thereof, which are shown on the reference maps, excluding numbered ponds, unless exceptions are expressly stated.

(d) Name as appearing in table I shall mean the name by which the specifically designated waters are known and which name may appear on the reference maps. In cases of specifically designated waters which have no name, the named waters to which the unnamed waters are tributary are identified as far as possible.

(e) Description. The column headed "Description" contains designations or sections of waters to which a particular assignment of a class and standards shall apply. Also included in this column is any useful information pertinent to the classification or standards.

(f) Map Ref. No. as appearing in table I, means map reference number and indicates one or more of the following numbered maps reproduced herein completely, or in part in section 879.9, infra, on which the specifically designated waters and their index numbers are shown.

(1) The following maps were produced from original maps which may be procured through the Washington Distribution Section, Geological Survey, Silver Spring, Maryland.

(g) Class as appearing in table I, and denoted by the letters AA, A, B or C opposite each specifically designated waters, shall mean class AA, A, B or C as the case may be, as set forth in Part 701, supra.

(h) Standards as appearing in table I, and denoted by the letters AA, A, B or C opposite each specifically designated waters, shall mean the quality standards established for class AA, A, B or C as the case may be, as set forth in Part 701, supra. The symbol (T) appearing after any class designation shall mean that the designated waters are trout waters and that the dissolved oxygen specification for trout waters shall apply thereto. The symbol (TS) after any class designation shall mean that the designated waters are suitable for trout spawning, and that the dissolved oxygen specification for trout spawning waters shall apply thereto.

(i) The term trout as used in this Part means any fish in the following genera: "Coregonus", "Oncorhynchus", "Prosopium", "Salmo", "Salvelinus" and "Thymallus".

§879.4 Special Conditions

(a) All streams or other bodies of water which appear as lines to indicate natural waters on the reference maps herein, and which are not specifically designated in table I, shall be assigned the same classes and standards of quality and purity as the specifically designated waters to which they are directly tributary.

(b) All streams or other bodies of water which are not shown on the reference maps herein shall be assigned to class D, as set forth in Part 701, supra, except that any continuous flowing natural stream which is not shown on the reference maps shall have the same classification and assigned standards as the waters to which it is directly tributary.

(c) Notwithstanding the items indicated in table I and the aforementioned special conditions, (a) and (b), which, in some instances, may indicate assignment of other than class A to streams tributary to New York City water supply impoundments within lands owned by New York City, such waters within the boundaries of lands owned by New York City shall be assigned to class A with standards of quality and purity for class A.

(d) Notwithstanding the items indicated in table I and the aforementioned special conditions statements which, in some instances, may indicate assignment of classifications for waters contained within the boundaries of the State-owned forest preserve lands and, therefore, controlled under the provisions of the State Constitution and the Conservation Law, such waters are hereby excluded from classification to the extent that any part of such waters may be located within the boundaries of the State-owned forest preserve lands. All waters within 100 feet of the boundaries of the State-owned forest preserve lands shall be assigned to class A with standards of quality and purity for class A.

(e) Section 17-1105 of the Environmental Conservation Law provides that conflicting laws regarding water pollution control shall be ancillary to and supplement the Environmental Conservation Law, except if they are in direct conflict. Accordingly, the watershed rules and regulations promulgated to protect certain water supply areas shall not be abridged or altered.

(1) In regard to adoption of classifications and standards of water quality under article 17 of the Environmental Conservation Law, and in the enforcement of the provisions of such article, it is recognized that any rules and regulations either made or promulgated by the Department of Health under article 11 of the Public Health Law for the protection from contamination of public water supplies, will apply in accordance with law, and the adoption of classifications by the Department of Environmental Conservation herein shall in no manner limit the protection of waters afforded by said rules and regulations.

(2) In regard to adoption and enforcement of classifications and standards of water quality under article 17 of the Environmental Conservation Law for waters tributary to New York City water supplies, it is recognized that any rules and regulations of the New York City Board of Water Supply and the Department of Environmental Protection, as approved by the State Commissioner of Health, will apply in accordance with law, and the adoption of the classifications herein by the Department of Environmental Conservation and the enforcement thereof by the State Commissioner of Environmental Conservation in no manner shall limit or lessen or abridge the protection afforded by said rules and regulations of the New York City Board of Water Supply and Department of Environmental Protection.

§879.5 Assigned Classifications and Standards of Quality and Purity

The classifications and standards of quality and purity assigned to the surface waters specifically designated and described herein are set forth in table I, subject to the definitions and conditions stated above.

§879.6 Table I

**Table I
Classifications and Standards of Quality and Purity Assigned to Fresh Surface Waters Within the Schoharie Creek Drainage Basin, Albany, Delaware, Greene, Montgomery, Otsego, Schenectady and Schoharie Counties, New York. Except the Waters Contained Within Boundaries of State-owned Forest Preserve Lands**
